

KEY TRANSPOSING CHART

- Is a song too high or low for your voice?
- Are the chords difficult to play on a Uke?
- Or, do you want to play along with a recording but the key is different?

You can transpose any song to a new key by using this chart

Find the **Old Key** in the left column and the **New Key** in the right column. Now change (transpose) all the chords in the song from those in the **Old Key** row to those in the **New Key** row. For example, to change a song from the key of E (a good guitar player's key, but a tough ukulele playing key) to the Key of C (a great ukulele playing key), find "E" under **Old Key** and then "C" under **New Key**. Now you can see, that all the chords in that song that started with "B" would now start with "G." So, in this example a B7 would become a G7, and a Bm6 would now be a Gm6, and so on.

- You can also use this chart to place a capo for a quick key change.
